

# TWaver®

## UI Visualization Solutions

## TWaver<sup>®</sup> 2D

Since 2003

- Professional GUI toolkit for Telecom industry
- Adopt mainstream client technology
- Provide one-stop component product solution
- Provide professional topology, map, equipment component and other general GUI component such as table, tree and charts.
- Based on open technical standards, speed up the connection with backend and shorten the development time and save your cost.
- Provide plenty of prefabricate telecom business objects and elements
- Efficient and light graphics engine can be deployed on the desktop, or through web browser to present network topology, equipment and maps.

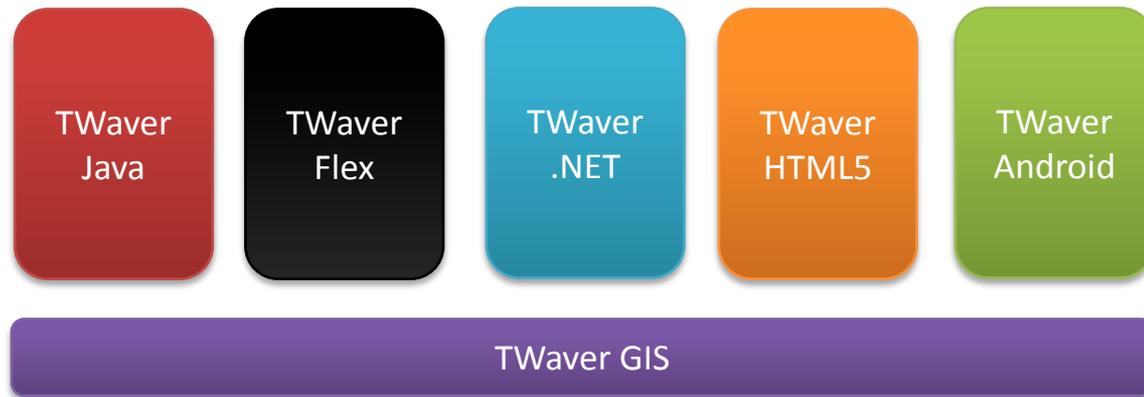

## TWaver<sup>®</sup> 3D

Since 2007

- TWaver's newest 3D visualization solution with a 3D rendering engine, a visualized 3D modeling editor, a template library at the industry level and API interfaces for programming.
- Based on TWaver 2D's mature structure and also embraces unique design concepts and technical features.
- Adopted technology such as MVP and ROD (Render-On-Demand), capable to present 20,000 ~ 50,000 3D objects in the browser and operate smoothly
- Highly encapsulated API requires no mastery of 3D techniques. Instead, API makes it possible to create a 3D scenario with only a few lines of code And seamlessly integrated it with your enterprise applications.

# TWaver 2D Products Family

network topology, data visualization, map solution

high performance, lightweight, flexible extension, cross platform

always offering high-quality UI solution for the Telecom industry

**MOTOROLA**

**SIEMENS**

**NEC**

Alcatel-Lucent

HUAWEI

中国移动通信  
CHINA MOBILE

中国电信  
CHINA TELECOM

**FUJITSU**

# TWaver<sup>®</sup> MONO DESIGN<sup>™</sup>

HTML5-based 3D Solution

# TWaver 3D Product Structure

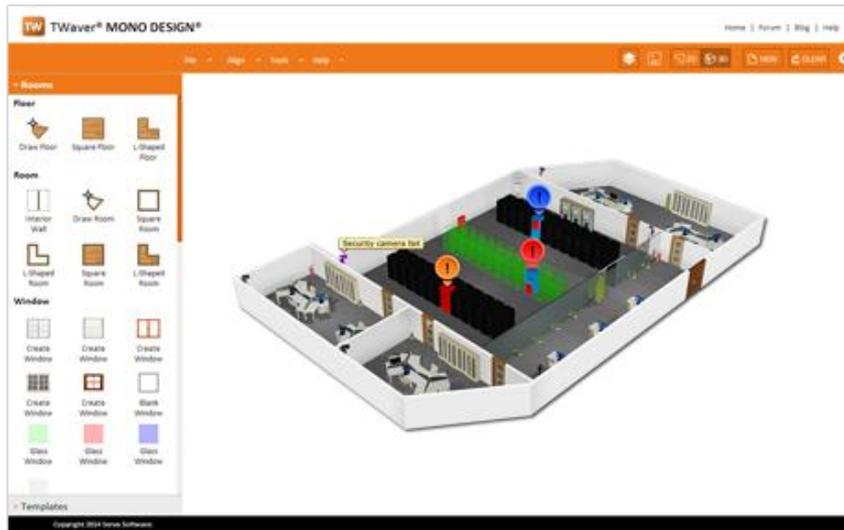

# No Coding, Just Drag-and-drop

With our simple, easy-to-use but powerful 3D modeling tool, all you need to do is drag-and-drop with the mouse,

## Without one line of code, only in ten minutes

You will create complex telecom equipment and data centers , and implant them to web applications based on the browser.

**Design without Coding**

Supports various browsers  
Takes all devices and platforms

Completely based on the Web technique,  
Say “Goodbye” to troublesome plugins  
Smoothly run in the mainstream browsers  
Suits for the desktop, tablet and mobile platforms

**“Modeling once, rendering ever since”**

# 3D Equipment Template Library

## Customize for your industry

- MONO DESIGN™ has predefined a 3D equipment template library
- From telecom equipment, data center, industry controller, to architecture, home furniture, and other industries
- Template library makes 3D modeling simpler than ever

# API Interface

## Getting started at any time

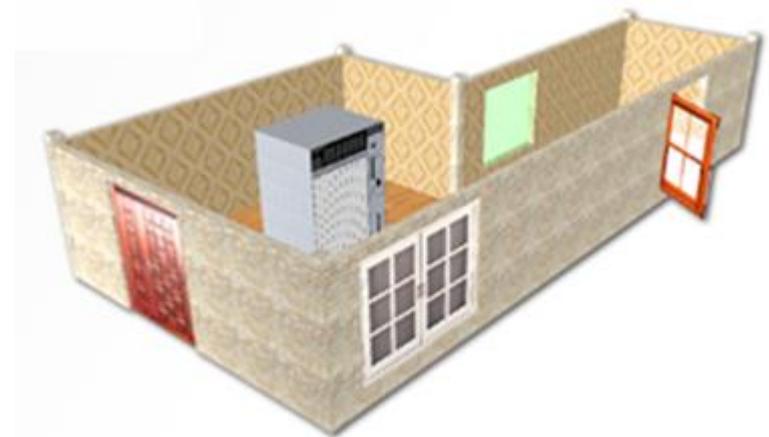

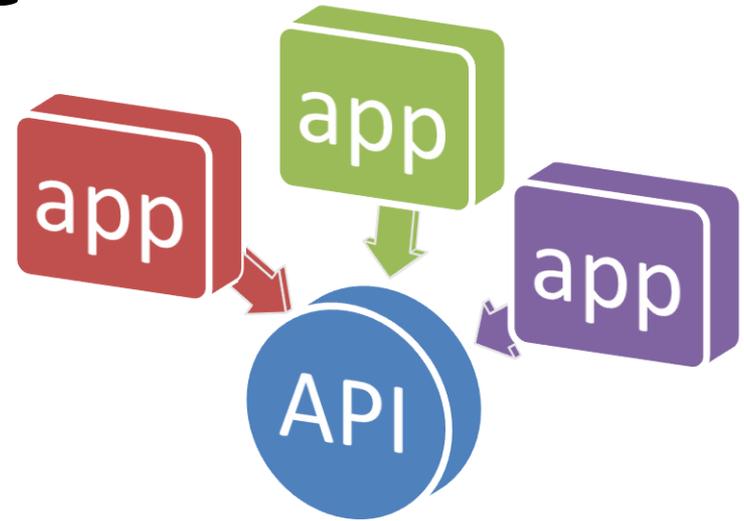

We provide complete API interfaces for 3D application development

Highly encapsulated API requires no mastery of 3D techniques

API makes it possible to create a 3D scenes with only a few lines of code

And seamlessly integrated it with your enterprise applications

```
function createScene() {  
  createRoom();  
  processWalls();  
  layoutEquipments();  
  
  render();  
}
```
